Observed trend: hiring +2.6% over the period; attrition +1.3pp; engagement -4.6pts. Corroborated across 5 documents. [hiring +2.6% over the period; attrition +1.3pp; engagement -4.6pts]

Methodology

Strategic intent is inferred from documents using a positive/negative-language lexicon applied at the sentence level for each line of business mentioned. Quantitative trends are computed across the full available time window for headcount, hiring, attrition, and engagement. Severity is scored by combining the strength of stated intent with the magnitude and direction of observed trends. All numbers used in this brief are reproducible from the source CSV files in the accompanying detail workbook.
